

Basic-G Germicide

Welcome to the world of Basic-G!!!

You're going to love being germ-free with Basic-G. It is a super alternative to using chlorine bleach and other disinfecting sprays, which cost \$2.50 for a 32 oz. bottle, where Basic-G costs \$.08 for a 32 oz. bottle of diluted spray (why pay for water when you can buy concentrate and dilute it as needed).

Here are some helpful hints to begin using your Basic-G:

Mix 1 to 1 ½ Tablespoons with 1 gallon of water. Pour into 16-oz. spray bottle and use for overall disinfecting. Can be sprayed on and left on (ie. at night you can spray the bathroom and kitchen sinks, then wipe them down in the morning).

Or, you can mix ½ to ¾ of a **teaspoon** in a 16-oz. bottle of water directly to use as your disinfectant.

The concentrate can also be poured directly into the washing machine during the rinse cycle (about 1 ½ to 2 Tablespoons) to disinfect laundry. This is excellent for cloth diapers.

For air freshener, put a couple drops into a spray bottle with water. Use in the bathroom as an alternative to the aerosol air fresheners (which can leave a flammable residue even when they dry).

If someone is having difficulty with athletes feet or “yucky” toe nails, use 1 – 2 teaspoons of concentrate in about 1 gallon of hot water as a foot soak (soak feet until water gets cold). ☺ Repeat this process for 3 consecutive days.

Be sure to read the label on the bottle of your Basic-G concentrate for further directions.

The disinfecting properties of Basic-G last 72 hours. This means that any bacteria or virus that lands on a surface within 72 hours of the Basic-G application will be destroyed. Chlorine bleach (which is highly toxic for the nervous system) has disinfecting properties of 1 hour.

Remember ½ oz. equals 1 tablespoon.

If you'd like further information about Basic-G, or any of our other safe cleaning products, please call us at (616) 696-6121.

Enjoy! Happy germ fighting!
